Reduce production reject rates and increase quality. Learn how to design, implement, and maintain an effective ISO 9001:2008 quality system for automotive supply chain manufacturing operations.

The **IATF 16949:2016** standard holds immense significance as a quality management framework tailored specifically for the automotive sector. To tackle recent challenges in the industry head-on, several notable enhancements have been incorporated into this automotive quality standard. These updates encompass a range of vital aspects, including a heightened emphasis on capturing and addressing customer-specific requirements in greater detail.

Moreover, personnel safety requirements now include provisions for training, prioritizing the well-being and competence of individuals. Furthermore, suppliers involved in the development program must be certified to ISO 9001:2015, with particular attention given to those demonstrating poor performance, thus fostering continuous improvement throughout the supply chain.

These enhancements collectively strengthen the IATF 16949:2016 standard, ensuring that it remains a robust and adaptive quality management system for the automotive industry.
