Developing Solutions for Microsoft Azure (AZ-204)

Lösungsentwicklung für die Azure Cloud

Seminar	4 Termine verfügbar	Teilnahmebescheinigung
Präsenz / Virtual Classroom	40 Unterrichtseinheiten	Online durchführbar

Seminarnummer: 29494 | Herstellernummer: MOC-AZ-204

Stand: 16.06.2026. Alle aktuellen Informationen finden Sie unter https://akademie.tuv.com/s/29494

Eine Azure-Cloud-Entwicklung ist die Grundlage für die meisten modernen Cloud-Lösungen. In diesem Kurs lernen Entwickler, wie sie End-to-End-Lösungen in Microsoft Azure erstellen können. Dieses Seminar ersetzt das Seminar AZ-203 und die Zertifizierung zum Azure Developer Associate ist als Ersatz für die bisherige MCSD (Microsoft Certified Solutions Developer) Zertifizierung gedacht.

Nutzen

Students will learn

- how to implement Azure compute solutions
- create Azure Functions
- implement and manage web apps
- develop solutions utilizing Azure storage
- implement authentication and authorization
- secure their solutions by using KeyVault and Managed Identities.
- how to connect to and consume Azure services and third-party services
- include event- and message-based models in their solutions.

The course also covers monitoring, troubleshooting, and optimizing Azure solutions. This training is aligned to Azure Exam: AZ-204 Developing Solutions for Microsoft Azure.

Zielgruppe

Solution and Software Developer and Architects who are interested in Azure cloud development and/or in passing the Microsoft Azure Developer Associate certification exam AZ-204.

Voraussetzungen

- Students should have 1-2 years experience as a developer. This course assumes students know how to code and already have a fundamental knowledge of Azure.
- That means to have a base understanding of Azure and cloud concepts, services and the Azure portal, which can be learned in the Azure Fundamentals course AZ-900.
- It is recommended that students have some experience with PowerShell or Azure CLI, working in the Azure portal, and with at least one Azure-supported programming language. Most of the examples in this course are presented in C#, HTML and .NET.

Inhalte des Seminars

Module 1: Creating Azure App Service Web Apps

Students will learn how to build a web application on the Azure App Service platform. They will learn how the platform functions and how to create, configure, scale, secure, and deploy to the App Service platform.

- Azure App Service core concepts
- Creating an Azure App Service Web App
- Configuring and Monitoring App Service apps
- Scaling App Service apps
- Azure App Service staging environments

Module 2: Implement Azure functions

This module covers creating Functions apps, and how to integrate triggers and inputs/outputs into the app.

- Azure Functions overview
- Developing Azure Functions
- Implement Durable Functions

Module 3: Develop solutions that use blob storage

Students will learn how Azure Blob storage works, how to manage data through the hot/cold/archive blob storage lifecycle, and how to use the Azure Blob storage client library to manage data and metadata.

- Azure Blob storage core concepts
- Managing the Azure Blob storage lifecycle

- Working with Azure Blob storage

Module 4: Develop solutions that use Cosmos DB storage

Students will learn how Cosmos DB is structured and how data consistency is managed. Students will also learn how to create Cosmos DB accounts and create databases, containers, and items by using a mix of the Azure Portal and the .NET SDK.

- Azure Cosmos DB overview
- Azure Cosmos DB data structure
- Working with Azure Cosmos DB resources and data

Module 5: Implement IaaS solutions

This module instructs students on how to use created VMs and container images to use in their solutions. It covers creating VMs, using ARM templates to automate resource deployment, create and manage Docker images, publishing an image to the Azure Container Registry, and running a container in Azure Container Instances.

- Create and deploy ARM templates
- Create container images for solutions
- Publish a container image to Azure Container Registry
- Create and run container images in Azure Container Instances

Module 6: Implement user authentication and authorization

Students will learn how to leverage the Microsoft Identity Platform v2.0 to manage authentication and access to resources. Students will also learn how to use the Microsoft Authentication Library and Microsoft Graph to authenticate a user and retrieve information stored in Azure, and how and when to use Shared Access Signatures.

- Microsoft Identity Platform v2.0
- Authentication using the Microsoft Authentication Library
- Using Microsoft Graph
- Authorizing data operations in Azure Storage

Module 7: Implement secure cloud solutions

This module covers how to secure the information (keys, secrets, certificates) an application uses to access resources. It also covers securing application configuration information.

- Manage keys, secrets, and certificates by using the KeyVault API
- Implement Managed Identities for Azure resources
- Secure app configuration data by using Azure App Configuration

Module 8: Implement API Management

Students will learn how to publish APIs, create policies to manage information shared through the API, and to manage access to their APIs by using the Azure API Management service.

- API Management overview
- Defining policies for APIs
- Securing your APIs

Module 9: Develop App Service Logic Apps

This module teaches students how to use Azure Logic Apps to schedule, automate, and orchestrate tasks, business processes, workflows, and services across enterprises or organizations.

- Azure Logic Apps overview
- Creating custom connectors for Logic Apps

Module 10: Develop event-based solutions

Students will learn how to build applications with event-based architectures.

- Implement solutions that use Azure Event Grid
- Implement solutions that use Azure Event Hubs
- Implement solutions that use Azure Notification Hubs

Module 11: Develop message-based solutions

Students will learn how to build applications with message-based architectures.

- Implement solutions that use Azure Service Bus
- Implement solutions that use Azure Queue Storage queues

Module 12: Monitor and optimize Azure solutions

This module teaches students how to instrument their code for telemetry and how to analyze and

troubleshoot their apps.

- Overview of monitoring in Azure
- Instrument an app for monitoring
- Analyzing and troubleshooting apps
- Implement code that handles transient faults

Module 13: Integrate caching and content delivery within solutions

Students will learn how to use different caching services to improve the performance of their apps.

- Develop for Azure Cache for Redis
- Develop for storage on CDNs

Wichtige Hinweise

Jetzt Ihre Prüfung über die Nr. 29799 direkt mitbuchen!

Dieses Training ersetzt ab März 2020 das Seminar AZ-203, weil Microsoft sowohl die Azure Developerprüfung inhaltlich und von der Benummerung angepasst hat (nun auch AZ-204).

Damit Sie von einer möglichst hohen Durchführungschance profitieren, behalten wir uns vor, bei Bedarf mit dem autorisierten Microsoft Partner ETC – Enterprise Training Center GmbH zusammenzuarbeiten.

Terminübersicht und Buchung

Buchen Sie Ihren Wunschtermin jetzt direkt online unter https://akademie.tuv.com/s/29494 und profitieren Sie von diesen Vorteilen:

- Schneller Buchungsvorgang
- Persönliches Kundenkonto
- Gleichzeitige Buchung für mehrere Teilnehmer:innen

Alternativ können Sie das Bestellformular verwenden, um via Fax oder E-Mail zu bestellen.
